

Squatting toilet has liner or skirt with plastic tub/tray like other toilet.

Plastic storage container catches pee. Then it slides back on aluminum rails and catches water from bidet. Bidet is a 0.5-1L soda bottle with angled hole in cap made with a medium needle. Empty into a ventilated bucket or pee bottle.

If skirted, lift whole toilet to remove bucket. Or hinge one platform at one end, put pins at the other, not screws. Or just pins at each end. Lift platform out of the way to remove bucket. Empty into compost bin and cover with dirt then leaves, straw, etc.

If bucket lid has airtight seal, fan can be switched off between uses.
